# Measuring Systems Change

## USAID's Current Thinking

August 27, 2015

**USAID**  
FROM THE AMERICAN PEOPLE

# Measuring Systems Change:

1. **Why** its important
2. **What** it is
3. **How** to do it (at least some preliminary ideas)

**USAID**  
FROM THE AMERICAN PEOPLE

# Starting point

**Available at:**

[http://www.usaid.gov/policy/  
local-systems-framework](http://www.usaid.gov/policy/local-systems-framework)

**USAID**  
FROM THE AMERICAN PEOPLE

## Big idea

**Achieving and sustaining** any development outcome depends on the contributions of multiple and interconnected actors.

**USAID**  
FROM THE AMERICAN PEOPLE

# The Local Systems Framework

**Think** systemically

**Work** systemically

**Align** incentives

**USAID**  
FROM THE AMERICAN PEOPLE

# Way forward

- 1. Spread systems thinking**
- 2. Integrate systems thinking and local systems into the program cycle**
- 3. Add to the ways we can support local systems**
- 4. Develop ways to measure system change**
- 5. Refine risk assessment methods and tools**
- 6. Initiate a series of ex-post evaluations**
- 7. Reinforce staff skills**

# The 5-Rs

➔ <b>[Target] Results</b>	The specific outcome sought
➔ <b>Roles</b>	The functions that actors take on
➔ <b>Relationships</b>	The interconnections between actors in the system
➔ <b>Rules</b>	Regulations, policies, norms that structure the system
➔ <b>Resources</b>	Inputs into the system—financial, human

# Indicator approaches

Sentinel Indicators

Dynamic Indicators

Organizational Performance Index

. . . and many others

**USAID**  
FROM THE AMERICAN PEOPLE

# Current thinking

## **1. A framework is key**

- Need a way to identify which facets of systems are most important

## **2. No one right way**

- Approaches vary in terms of what aspects of systems they are best suited to measure
- Requires a portfolio approach

## **3. We have a steep learning/education curve**

- Methods are unfamiliar
- Utility is unproven

## **4. We need an aggressive piloting/learning process**
